(54) Title: MAGNETIC-FIELD-SENSITIVE SENSOR ARRANGEMENT

(57) Abstract: A magnetic -field-sensitive sensor arrangement  
comprises - a first conductor arrangement with at least two electrical  
half-bridges each having at least two bridge branches, at least one of  
which contains a magnetic-field-sensitive semiconductor element,  
which sensor arrangement supplies a measurement signal depending  
on the magnetic field strength of a component of a magnetic field  
at the location of at least one of the half-bridges, this being referred  
to as the measurement field and being aligned in a measurement  
direction of the sensor arrangement, and - a device which forms  
the measurement field with a value of its magnetic field strength,  
which depends on the magnetic permeability of a medium that  
at least partially surrounds the sensor arrangement, whereby the  
measurement signal is a measure of the magnetic permeability of  
the medium. A simple sensor arrangement for measuring a medium  
which affects a magnetic field is thus provided.
